Experiment No. 8
Implement Restoring algorithm using c-programming
Name: Saurabh Mane
Roll Number: 25
Date of Performance:
Date of Submission:

**Aim:** To implement Restoring division algorithm using c-programming.

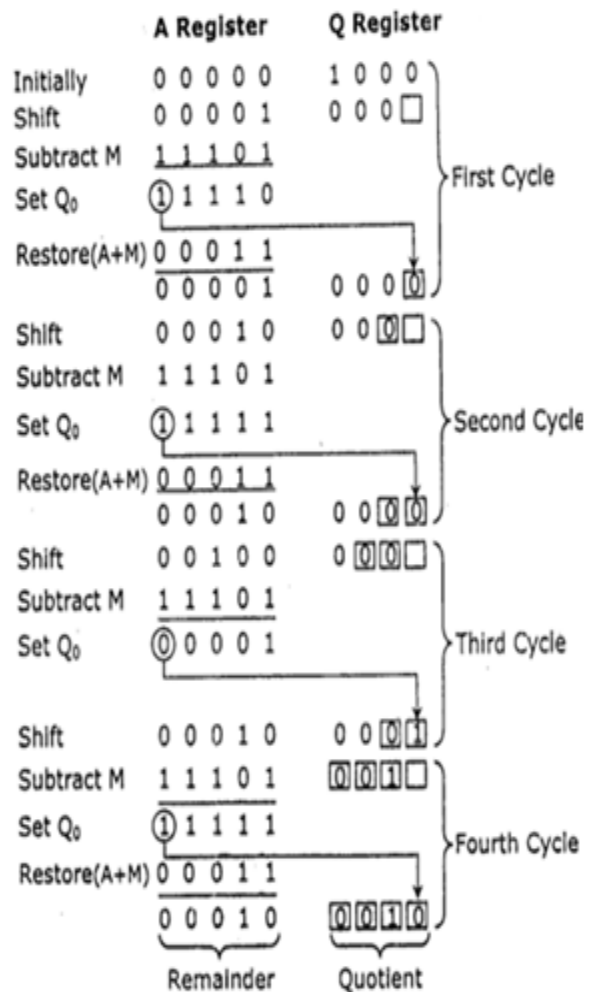

### Objective -

1. To understand the working of Restoring division algorithm.
2. To understand how to implement Restoring division algorithm using c-programming.

### Theory:

- 1) The divisor is placed in M register, the dividend placed in Q register.
- 2) At every step, the A and Q registers together are shifted to the left by 1-bit
- 3) M is subtracted from A to determine whether A divides the partial remainder. If it does, then Q0 set to 1-bit. Otherwise, Q0 gets a 0 bit and M must be added back to A to restore the previous value.
- 4) The count is then decremented and the process continues for n steps. At the end, the quotient is in the Q register and the remainder is in the A register.

### Flowchart

## Program-

```
#include <stdio.h>
```

```
#include <stdlib.h>
```

```
int dec bin(int, int []);
```

```
int twos(int [], int []);
```

```
int left(int [], int []);
```

```
int add(int [], int []);
```

```
int main()
```

$$\{$$

```
int a, b, m[4]={0,0,0,0}, q[4]={0,0,0,0}, acc[4]={0,0,0,0}, m2[4], i, n=4;
```

```
printf("Enter the Dividend: ");
```

# Vidyavardhini's College of Engineering and Technology

### Output -

Enter the Dividend: 12

Enter the Divisor: 2

A	Q	Comments
0000	1100	Start
0001	100_	Left Shift A,Q
1111	100_	A=A-M
0001	1000	Qo=0; A=A+M
0011	000_	Left Shift A,Q
0001	000_	A=A-M
0001	0001	Qo=1
0010	001_	Left Shift A,Q
0000	001_	A=A-M
0000	0011	Qo=1
0000	011_	Left Shift A,Q
1110	011_	A=A-M
0000	0110	Qo=0; A=A+M

Quotient = 0110      Remainder = 0000

### Conclusion -

In conclusion, the implementation of the Restoring Division Algorithm using the C programming language offers a powerful method for efficient and precise division operations. Through this project, we have explored the intricacies of this algorithm, emphasizing its significance in modern computing. By leveraging C's robust features and versatility, we have successfully translated the theoretical framework of the Restoring Division Algorithm into a functional codebase. As a result, we have not only deepened our understanding of division algorithms but also honed our programming skills.
